

Introduced Plants

As a former golf course surrounded by homes, there are a range of cultivated, introduced, and invasive species living within Vistoso Trails. Some of these are faring poorly with the irrigation switched off, but others (especially tumbleweed) are thriving and will require management to prevent them from invading the native habitats within the preserve .

In this guidebook:

- Red Yucca (Page 146)
- Cenizo (Page 146)
- Tree Tobacco (Page 147)
- Chilean Mesquite (Page 147)
- Tumbleweed (Page 148)

Common name: Red Yucca

Scientific name: *Hesperaloe parviflora*

Notes: Not a true yucca. Javelinas love them.

Common name: Cenizo

Scientific name: *Leucophyllum frutescens*

Notes: Native to Texas. Grows as a bush.

Common name: Tree Tobacco

Scientific name: *Nicotiana glauca*

Notes: Native to South America. Toxic.

Common name: Chilean Mesquite

Scientific name: *Prosopis chilensis*

Notes: A tree. See also page 120.

Common name: Tumbleweed

Scientific name: *Salsola tragus*

Notes: A growing, young plant pictured on left. A dried, adult plant on right. Very common on former greens and fairways. Also known as Russian Thistle. Extremely invasive and noxious.
